Sonicator **Q700**[Features](#)[Specifications](#)[Accessories](#)

The new Q700 is the most technologically advanced sonicator available today. A state-of-the-art touch screen interface offers intuitive control and provides a user-friendly experience. The most important feature of a Sonicator is reproducibility. Improved internal circuitry guarantees more efficient operation, sample-to-sample consistency and most importantly, a reliable end result.

The Q700 is the only sonicator on the market that offers full amplitude control from 1-100%. This enables greater control of the probe's intensity, helping to pinpoint the optimum settings for efficient sample volumes. We have increased maximum power output by 100 watts making the system more durable and capable of handling even larger sample volumes. Our new display, design improvements and added accessories make this the most sophisticated and versatile Sonicator available today.

Part # Q700 includes the following components:

Generator
Converter
Converter Cable
1/2" probe
Power Cable
Wrench Set
Owner's Manual
Stand sold separately
